

WALL ADHESIVE

FOR INDOOR USE

Tips for Best Results

- It is important to choose a wall that has a flat, smooth, and dry surface.
 - For freshly painted walls, be sure to allow enough time for the paint to fully dry.
 - We recommend avoiding cold or damp surfaces, anywhere near heaters, fire or radiators. Intended for indoor use only.
-

Instructions

- 1** Make sure that your poster will fit the space on the wall. Measure your wall and your poster.
 - 2** Use a dry, clean cloth to remove any dust from the wall. If a damp cloth is used, remember to allow enough time for the wall to dry as some surfaces can absorb moisture.
 - 3** Spread out the poster on a flat surface, face down. Start at one of the corners and peel the off the backing from the top down. For smaller prints, it's fine to peel off the entire backing paper. For larger prints, we recommend that you start by peeling back only the top 6-8 inches of backing paper. Crease it all the way across so that it stays flat and out of the way when you begin to apply the poster.
 - 4** The adhesive backing is pressure sensitive so apply it to the wall lightly at first until you have the poster where you want it. Once it's in place, you can press it more firmly. Smooth out the top of the poster and any air pockets or wrinkles by gently working your way from the center out.
 - 5** Slowly peel down the backing paper a few inches at a time. Press the print to the wall from the center out as you work your way down to the bottom of the print.
-

Removal and Safe Storage

Carefully remove from the wall by starting at one corner. Once the poster is off the wall, you can either install it in a different location or store it for later use. For safe storage, we suggest reapplying the backing paper that it came with originally. You can also use a non-stick paper substitute, such as parchment paper. This will help keep the adhesive side of the poster clean.
